How does the Sun Shine?

The Sun, or any star for that matter, "shines" or "burns" due to a process of thermonuclear fusion, not due to a chemical reaction like the oxygen-driven fires on Earth. Because the Sun is so massive, it has great gravity and so its core is under tremendous levels of pressure and heat.

Is sunlight good for your health?

So, make sure sensible sun exposure is part of your overall health program. Though sunshine is by no means a replacement for the meds some people need, morning sunlight exposure has been linked to cardiovascular benefits, including the reduction of blood pressure and overall improvement of heart health.

Do you really need a lot of sunlight?

Sunlight plays a role in your overall health and well-being, says family medicine doctor Charles Garven, MD. So, it's important to figure out how to benefit from those rays while also protecting yourself from the damage that too much sun can do. "In general, you typically need much less direct sunlight than you might think," Dr. Garven notes.

Is sun exposure good or bad for You?

Talk to your healthcare provider to determine the best balance for you. Sun exposure in the morning increases vitamin D and serotonin, essential to your health. Morning sun exposure has many other benefits, too, including better sleep at night, improved mood, and decreased risk of various health conditions.
