Who is responsible for a project under an EPC contract?

A single contractor has complete responsibility for a project under an engineering, procurement and construction (EPC) contract. EPC refers to both the type of construction contract and the project delivery method, and it is often used for large-scale construction projects. It offers fixed costs and a single, experienced point of contact.

What is an engineering procurement & construction (EPC) contractor?

An engineering, procurement, and construction (EPC) contractor is a company that takes full responsibility for delivering complex construction projects from start to finish. Project owners, who initiate and oversee construction projects, often engage EPC contractors for their expertise in managing the entire project lifecycle.

What is the difference between an EPC and a general contractor?

As mentioned, EPC contractors are responsible for managing the entire project lifecycle, overseeing all aspects of the project--from engineering and procurement to construction and commissioning. In contrast, general contractors typically focus on construction execution and coordination, with less involvement in design and procurement.

Why should you use an EPC contract in construction?

Using an EPC contract in construction is beneficial when a project is large or complex, the owner wants to minimize risk and stick to a strict cost, and performance and schedule are top priorities. EPC project delivery offers a streamlined and risk-reducing approach to construction.

Understanding the differences between EPC and general contractors is crucial for successful construction projects. Explore the nuances and ...
