What are China's new export controls on LFP batteries?

The new export controls on the latest technology upgrades for LFP batteries, a sector where Chinese firms hold global dominance, reflect China's ongoing strategy of restricting exports of critical materials and technologies. Battery makers outside China have a new headache to worry about. Export controls on the latest LFP battery technology

Could a new export ban slow progress towards sustainability?

The proposed export ban comes at a critical moment in the global energy transition. With many industries attempting to accelerate their movement away from fossil fuels, such technological restrictions could potentially slow progress towards sustainability goals. Dr Tara Lindstedt, Chief Development Officer at InoBat, is an expert in this industry.

Can China halt exports if there are discrepancies?

Chinese customs authorities will have the power to delay or halt shipments if any discrepancies or uncertainties arise regarding the nature of the exported goods. This latest move builds on China's earlier export controls on natural graphite, lithium iron phosphate (LFP) cathode active material (CAM), and lithium processing technologies.

What is the battery export Amendment?

The official Amendment follows a consultation draft published in January this year. The Amendment imposes export restrictions on key technologies relating to critical battery materials and minerals, impacting the upstream and midstream battery supply chain.

This policy brief provides an overview of the primary provisions of U.S. trade law that have been used to address trade ...

China's energy-storage industry is facing challenges in 2025 due to the escalating US-China trade war and

tariffs affecting exports to ...

The Amendment imposes export restrictions on key technologies relating to critical battery materials and minerals, impacting the upstream and midstream battery supply chain.

The proposed export ban comes at a critical moment in the global energy transition. With many industries attempting to accelerate their movement away from fossil ...

On October 9th, China's Ministry of Commerce (MOFCOM) announced the implementation of export control measures related to lithium batteries and synthetic graphite ...

China's export controls on LFP shake up the global battery market; Tesla's success story in energy storage systems continues. Every week, the battery landscape shifts in ...

China has announced new export control measures targeting a wide range of lithium battery technologies, materials, and manufacturing equipment. The decision, approved ...

China has announced new export control measures targeting a wide range of lithium battery technologies, materials, and manufacturing ...

China to restrict battery and equipment exports China is preparing to tighten the flow of critical materials used in energy storage. The Asian giant, which currently dominates ...

The proposed export ban comes at a critical moment in the global energy transition. With many industries attempting to accelerate ...

Looking more closely at countries with solar and energy storage manufacturing and assembly, the announced custom tariff rates ...

China Restricts Export of LFP BESS Technology Now The new export controls on the latest technology upgrades for LFP batteries, a sector where Chinese firms hold global ...

How Might These Restrictions Impact Global Supply Chains? The new restrictions on battery technologies and lithium processing could have significant implications for global ...

China Restricts Export of LFP BESS Technology Now The new export controls on the latest technology upgrades for LFP batteries, a ...

China's energy-storage industry is facing challenges in 2025 due to the escalating US-China trade war and tariffs affecting exports to the US, its largest market.

China introduces new export restrictions on lithium battery technologies, focusing on lithium iron phosphate and extraction technologies, impacting global supply chains.

interconnection process for ESS. Energy storage export and import can provide beneficial service to the end-use customer as well as the electric grid. These capabilities can, for example, ...

The Amendment imposes export restrictions on key technologies relating to critical battery materials and minerals, impacting ...
