Do you carry IP55 enclosures?

We carry IP55 enclosures that demonstrate almost complete protection from particles and a good level of protection against water. All of our enclosures rigidly adhere to the guidelines, so you can count on outstanding and cost-effective enclosures. Refer to the chart below for the IP55 standard protection specifications and ratings:

Why should you choose an outdoor electrical enclosure with an IP55 rating?

When you choose an outdoor electrical enclosure with an IP55 rating, you get a solid balance between protection against dust and water. The IP55 rating means your equipment receives almost complete protection from dirt, dust, oil, and other non-corrosive materials. You also gain complete protection from contact with the enclosed equipment.

What is the difference between IP55 & IP66 enclosures?

IP55 enclosures protect against dust that could interfere with normal operation and can handle water jets from any angle. IP65 enclosures are fully dust-tight and shield your equipment from low-pressure water jets. IP66 enclosures offer the highest protection, keeping out all dust and withstanding powerful water jets.

Why are IP55 enclosures more expensive than IP65 enclosures?

Higher protection levels often mean higher prices. IP55 enclosures cost less because they offer basic protection. IP65 enclosures cost more due to better dust and water resistance. IP66 enclosures have the highest price because they provide the strongest protection. IP55: Budget-friendly for simple outdoor setups.

Compare IP55, IP65, IP66, IP67 and IP54 electrical enclosures. Learn how each rating applies to smart transportation, ...
