-----  
Can a solar array cause electric shock?

Because GSS facilities are, in essence, power plants, the equipment in a solar array is capable of producing deadly electric shock. However, the substantial perimeter fencing and appropriate signage about the dangers, as required by the National Electric Code, should keep the public out of the facility. Planning recommendation:

Why is Harris County suing a hub home?

Harris County, which includes Houston, is now a plaintiff in one of multiple lawsuits over the cancellation. People involved with the program acknowledge hub homes are unconventional -- requiring trust and community cooperation and impacting fewer people than a larger resilience center.

Why have power interruptions soared in the last decade?

Average annual power interruption hours across the U.S. have jumped in the last decade, largely due to extreme weather, according to Sarah Kotwis, senior associate at the clean energy nonprofit RMI. "Communities do need to be thinking more strategically about resilience," said Kotwis.

What are the risk factors for a solar array?

Floodplains and wetlands. Corrosive or rocky soil. Karst landscapes. Sites are likely to experience a higher-than-average risk of tornadoes, snow loads, and wind. Shading: A 50 percent drop in efficiency can occur with even 10 percent shading of an array. An airport within 2 miles.

When considering solar power installations, safety concerns predominantly revolve around electrical risks, structural integrity, and fire hazards. Electric shock or electrocution ...

Outdoor electrical safety fails fast if overcurrent devices cannot survive rain, dust, heat, and salt. Weatherproof overcurrent protection keeps faults small, local, and clearable ...
