What is the capacity of battery energy storage system design in Europe?

By the end of 2023, the cumulative installed capacity of battery energy storage system design in Europe will reach 35.9GWh, with Germany and Italy contributing more than 50% of the market share.

How big will Europe's energy storage capacity be by 2024?

It is expected that by 2024, Europe's large energy storage capacity will reach 11GWh, an increase of 205%. By 2028, this figure will rise to 35.9GWh, and large-scale energy storage will become an important part of the European power system.

What is the largest energy storage project in Europe?

Particularly noteworthy is the ambitious project in Alfeld (Lower Saxony), which is considered the largest approved storage project in Europe with a performance of 137.5 megawatts and a storage capacity of 275 megawatt hours.

What is the European energy storage inventory?

The European Energy Storage Inventory presents itself as an interactive and user-friendly dashboard, which enables a detailed recording and presentation of energy storage projects across Europe. The platform offers extensive filter functions that allow users to sort and analyze the data according to various criteria.
