-----  
What voltage does a Genesys 10kW 15kW power supply use?

The Genesys™ Series 10kW/15kW power supply can be operated from a nominal three-phase 208VAC, 400VAC or 480VAC, 4 wire, 47-63 Hz AC input. The AC input voltage range and current required for each model is specified in Chapter 2, Section 2.2 (Input Characteristics).

How to set up two-wire a 10kW / 15kW model?

Use the "Two-Wire" method for 10kW/15kW Models where  $25V \leq V_{out} \leq 600V$ . 6.2.1. Basic Parallel Operation In this method, setting the units as Master and Slaves is made by the rear panel J1 Remote Analog connections and the setup switch SW1.

How do I repack my TDK-Lambda power supply?

Repackaging for Shipment To ensure safe transportation of the instrument, contact the TDK-Lambda Americas Inc. Sales or Service facility near you for Return Authorization and shipping information. Please attach a tag to the power supply describing the problem and specifying the owner, model number and serial number of the Power Supply.

How do I maintain the isolation of the power supply?

To maintain the isolation of power supply and prevent ground loops, use an isolated programming source when operating the power supply via Remote Analog programming at the J1 connector. Turn the AC On/Off power switch to the OFF position.
