-----  
How much does a 15kW solar system cost?

The typical cost for a 15kW solar system is around \$30,000. However, it is worth noting that the prices of solar panels have decreased significantly over the past decade. This decrease in cost has made solar systems more affordable and accessible to a wider range of consumers. Source: The National Renewable Energy Laboratory (NREL)

Can a 15kW solar system save you money?

A 15kW solar system has the potential to save you a significant amount of money on your electricity bills. On average, this system can save up to \$4,654 per year. Over the 25-year lifetime of the solar panels, you can expect to save a total of \$116,344. The cost of electricity has been steadily increasing over the past four decades.

How much space does a 15kW solar system take up?

A 15kW solar system with 50 panels will occupy an area of approximately 850 square feet. It is essential to consider this space requirement when planning the installation of your solar system. How Many kWh Does a 15kW Solar System Produce? (Load Per Day) On average, a 15kW solar system can produce around 75 kWh of electricity per day.

Can a 15kW solar system go off-grid?

If you are planning to go completely off-grid with your 15kW solar system, you will need to consider additional factors. For an off-grid system, you will need to purchase 50 or more solar panels to meet the energy demands. Furthermore, you will require 95 kWh worth of lithium polymer batteries to support a full cycle.

If you invest in renewable energy for your home such as solar, wind, geothermal, fuel cells or battery storage technology, you may qualify for an annual residential clean energy tax credit.
