Why are solar photovoltaic systems the most popular off-grid solution?

Among all RET resources, solar photovoltaic (PV) systems are the most widely used off-grid solutions in remote and rural regions . This is due to the presence of abundant solar irradiance in most parts of the world and the decreasing cost of PV systems and accessories.

Can a PV hybrid system be a standalone off-grid power supply system?

It is also demonstrated in IEA-PVPS Report T9-13:2013 that PV hybrid systems are technically and economically feasible as a standalone off-grid power supply system for remote and rural communities worldwide .

Why are diesel-powered off-grid systems used in remote and rural areas?

Therefore, off-grid solutions are considered an integral part of the standalone off-grid power supply (SOPS) systems in the remote and rural areas by energy planners. Diesel-powered systems are primarily chosen to electrify these areas due to low capital cost and consolidated supply chain in the regions .

Can a framework be used to plan new isolated power systems?

A study conducted by Lombardi et al. (2016) proposed a framework to be used for planning new isolated power systems or upgrading the old ones in remote Russian regions. The framework was based on the AHP, aided with microgrid energy flow simulation using HOMER Energy tool.
