What is the energy sector like in Somalia?

Somalia's energy sector is considered promising for growth and investment. Small and medium-sized private sector companies are the main providers of electricity generation and distribution, primarily running diesel powered systems through off-grid networks.

How much electricity does Somalia have?

Somalia's energy story is at a juncture: it has an installed capacity of approximately 400 megawatts (MW), with 300 MW powered by diesel and 100 MW by solar and wind. Today, about 80% of urban households and only around 24% of rural communities have access to electricity, according to World Bank data.

Does Somalia have solar energy?

Solar Energy: Somalia has high renewable energy potential. Solar power could generate an excess of 2,000 kWh if the country reached its full capacity. Recently there has been progress in developing solar energy systems in the country by private sector electricity companies.

Who generates electricity in Somalia?

Small and medium-sized private sector companies are the main providers of electricity generation and distribution, primarily running diesel powered systems through off-grid networks. Private Somali companies generate approximately 128 MW; most companies generate and distribute electricity independently.
